

# Forged Blade Stock For The Turbomachinery Industry

As part of our on-going commitment to remain the supplier of choice to the turbomachinery industry, Patriot is proud to introduce even faster deliveries on custom forged blade stock.

## The Alternative

Patriot now offers fast delivery of forged blade stock to accommodate your rush requirements for repair and unplanned outage applications. Production time is typically a fraction of rolled, cast or closed die product - especially for short runs. Stocking programs are also available for even faster overnight shipments.

## Materials & Quality

Forged blade stock provides the same metallurgical integrity and longitudinal grain flow as a hot-rolled stock.

The materials listed below are available in either air melt or ESR/VAR. The latter processes insure that chemical segregation as well as elongated metallic inclusions are minimized.
