

Additional Value Add Operations – reducing your total costs, time, and risk.

Patriot Forge Co. continues to invest in being the most capable and advanced full service forging company in class. In addition to supplying highest quality open die forgings and seamless rolled rings to global markets, Patriot has value added processes that OEM and Tier 1 customers count on to streamline their supply chains.

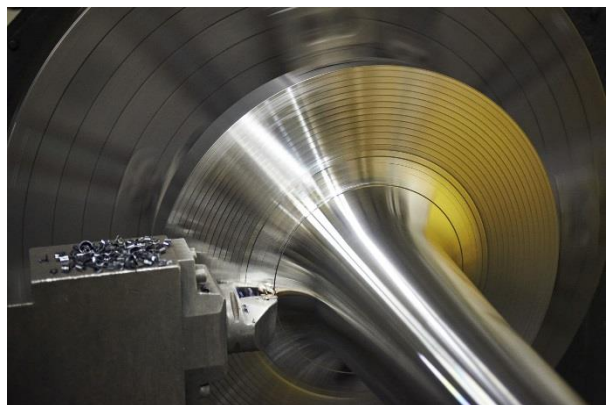

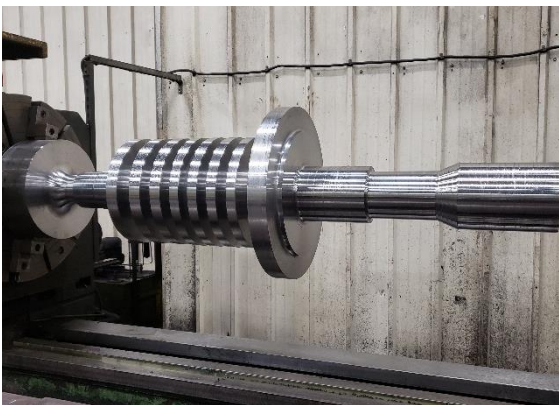

Patriot Forge Co offers select semi-finished and finished machining operations, as well as precision assembly capabilities.

By partnering with Patriot Forge to perform further value operations such as finished machining, and sub assembly and kitting, the following benefits can be realized:

- **Reduced cost:** Services can be bundled together, avoiding multiple markups from subsequent vendors and reducing administrative burdens.
- **Reduced delivery time:** delivery to your project or plant floor is reduced in total time as Patriot can maintain control of the project throughout the multiple process including shipping, receiving, and inspection - In most cases work is done all under one roof.
- **Responsibility for quality product:** Patriot assumes responsibility for the complete finished product that is shipped to you, eliminating issues between subsequent vendors and ensuring you get the results you need.

For more information on our Additional Value Add Operations for OEM and Tier 1 customers, please contact [sales@patriotforge.com](mailto:sales@patriotforge.com) or call 1-877-495-9542.
